

## Red One Camera LCD Clip-on finder

This inexpensive light weight device allows you to quickly turn your 5.6" Red LCD into high resolution viewfinder. Installs in a few seconds for tripod work and can be removed just as easily for hand-held/steady cam operators. At only few ounces it is much lighter than the EVF and when installed, it is easily supported by the standard LCD arm.

There is no need to spend \$3000 and wait for months for the EVF.  
The Clip-on finder does the job just as good at a fraction of the price.

- All metal construction
- High quality glass optics with minimal distortion and no color separation.
- Focusing capability
- Can be installed and removed in a few seconds.
- Optically comparable and great alternative to Red \$3000 EVF
